I. Love. Coding. From my very first "Hello World" in February 2021, my life has never been the same. I am a passionate frontend developer with full-stack aspirations. I am currently looking for a junior developer role with opportunities to grow my skills and my career. My ideal team is one that likes animated and interactive experiences, loves beautiful and responsive designs, and enjoys developing people as much as developing applications!

Skills

Semantic HTML5 | CSS3 (flexbox and grid) | JavaScript ES6 | ReactJS | Bootstrap | Node.JS | Express.JS | Git | Figma

Relevant Technical Experience

Full-stack Developer Intern

Tlancer

Apr 2022 - present

- Converted Figma design files into a responsive web application using ReactJS and Bootstrap frontend libraries
- W3C valid and Semantic HTML5 code / Lighthouse optimized
- Developed and launched landing page at: <https://www.tlancer.ge/>

WeatherExpress App <https://calm-springs-33834.herokuapp.com/>

This weather app was built with Node.js, Express.js and EJS and is the first backend app I've written completely from scratch. It uses the OpenWeather.org API to get data based on a zip code. It will use that response to get more detailed data such as hourly weather, extended forecast, cloud cover, chance of rain and more displayed via template 'views' with EJS. **CODE:** <https://github.com/guthribm/WeatherExpress>

Simple Blackjack App <https://guthribm.github.io/SimpleBlackJack/>

This app was inspired by a couple of projects in the Scrimba Frontend Developer Certification. It demonstrates consuming the API from deckofcardsapi.com as well as responsive design and game logic with custom rules and scoring using ES6 syntax. **CODE:** <https://github.com/guthribm/SimpleBlackJack>

MORE EXAMPLES OF MY WORK CAN BE FOUND ON MY PORTFOLIO PAGE AT: <https://guthribm.github.io/cv/>
